

# THE NEW SOS RESCUE RING

*Introducing SOS RESCUE RING -By SOS Marine-Survival Operations Specialists*

Media Release

8<sup>th</sup> October 2020

The rules and restrictions set by government bodies that tells us what safety products, how many etc we must carry on our boats. These are the minimum standards required to cover the people on your boat. It does not take into consideration other craft requirements.

What if we have to help rescue people from another boat, do we have any equipment to assist in that rescue? If we have any chance of rescuing people firstly, they have to be supported in the water.

Introducing the SOS RESCUE RING being only a small handbag size rescue product, which automatically inflates on contact to water, similar to an auto inflate life jacket. It is light, compact weighing 0.59Kg, packed size 300mm x 120mm, it is reusable after recharge.

It has a handle-designed to assist in gaining further distance throwing. The fluorescent yellow colour is easier to spot in water and it has three SOLAS reflective panels on each side, so it doesn't matter which side up it lands it is still visible.

Without costly maintenance and price tag, the SOS RESCUE RING is used to support the patient/or patients. It inflates to 150N; easy to roll-up, pack and go. It is made using ISO lifejacket approved components. Easily stored on a jet ski or tinny up to maxi yachts.

It can be **vacuum packed** for better storage protection in jet skis and other potentially wet boat areas. Prior to use the vacuum bag has to be **torn-open** and thrown under arm to the patient, an average distance of 20 metres is usually achieved. Numerous SOS RESCUE RINGS can be packed in a small space ready-for-use in an emergency.

One major requirement of rescue teams is the size-and-weight of carrying sufficient rescue equipment, especially on jet-skis, ribs and rescue helicopters. The SOS RESCUE RING is light-and-easy to operate in an emergency, less complicated to deploy and more efficient and easier to stow.

The SOS RESCUE RING is an invaluable tool for first responders, such as, coast guards, water police/jet-skis patrol, surf-lifesaving, and commercial users because multiple SOS RESCUE RINGS may be carried easily on their vessels.

The Australian-made SOS RESCUE RING is purpose-designed to provide an invaluable tool for those arriving first on scene to provide emergency flotation when no water rescue equipment is available.

SOS Marine designs and manufactures safety and rescue equipment for 15 Defence Forces worldwide.

The new SOS RESCUE RING available at [sosmarine.com](http://sosmarine.com) RRP AUS \$185.00
