SOS Marine Lifejackets performance stands out from the crowd

SOS Marine is responding to the growing global concern for the environment with the development of our foam lifejackets using PVC free foam. This foam is specially designed to be non toxic and environmentally friendly recyclable

As work stages evolve in a world that is becoming more mobile there is increase awareness for Occupational Health & Safety (OH&S) requirements.

New Innovation of managing dehydration in the marine environment

- By incorporating a water bladder within the vest this allows the wearer to have access to quality drinking water while working or in the event of a person-overboard situation.
- Dehydration is one of the main medical emergencies confronting supervisors.
- This personal water bladder may be easily removed from the rear of the lifejacket and replaced if worn by a new team member.

This also assists the **carbon footprint** associated with bottling and transporting plastic water bottles

- The foam lifejacket is made of woven fabric air textured material which allows the body to breathe. The outer material is water resistant and excellent for UV protection
- **SOLAS** grade reflective is places in several places on the lifejacket for high visibility.
