

PRESS RELEASE

For Immediate Release

6th February, 2013

4 WHEEL DRIVERS NOW HAVE A NEW RESCUE PRODUCT-RESCUE LASER FLARE

Greatland Laser has appointed SOS Marine as its exclusive distributor for Australia. The Rescue Laser Flare looks like typical small handheld flashlights, but produces a line of laser light intended for signalling during search and rescue operations.

Rescue Lasers are not a hazardous product to keep on a plane or boat. One of the outstanding benefits of these flares are they are battery operated lasting up to 2400 times longer than existing pyrotechnic flares. They can be seen up to 32 kilometres away at night and retail at reasonable price.

They are very different to laser pointer by having a different lens which is designed specifically for Search and Rescue Operations. At 12 kilometres from the light source the Laser Flare cover splays to 900 metres. Available in either a green or red light, they stand out when pointed at those being rescued or those being searched for.

Professional and military authorities as well as 4 wheel drivers, boaters, skiers, kayaker`s, hikers and other outdoor enthusiast in Australia can now carry this life-saving tool technology.

SOS Marine is an Australian company manufacturing safety and rescue equipment for 12 Countries Defence Forces and many maritime professionals worldwide.
