

PRESS RELEASE

November 2013

SOS Marine is showcasing their marine rescue innovations at METS 2013

SOS Marine identified the need to improve equipment capabilities for the people who spend 99% of their boating time within sight of land. The affordable SOS Dan Buoy and the SOS 2 Person Life raft are compact and portable man-overboard rescue systems "light and easy" to throw in an emergency.

The good news for all, especially the ladies who travel on board with their partners is that there is no assembly required. The multi-award winning SOS Dan Buoy rescue system, weighing only 4 kilos, is ready to deploy at any time. Just pick up and throw towards the person overboard and it auto-inflates. The SOS Dan Buoy has won several prestigious awards including the Australian Engineering Excellence Award for Welfare, Health & Safety.

The SOS 2 Person Life Raft, weighing 8 Kilos, offers coastal an easier system to use. Existing 4 + person rafts are heavy and cumbersome for a couple to move into position. The raft has optional emergency aids and a canopy. It is easy to maintain with reduced servicing costs.

SOS Marine is also at the forefront of professional lifejacket design. SOS custom-design and manufacture safety equipment for the Australian Defence Forces, Law Enforcements, Marine Rescue, Coast Guard, Marine Pilots and many commercial marine groups Australia-wide and for the changing global marketplace.

The SOS Marine's design approach combined with product differentiation provides high quality products for the world-wide market-place. SOS supplies safety equipment for the recreational boater and ocean vessels in the commercial, oil & gas markets and the Defence.

The high quality and unique design of SOS Marine's equipment is so well respected and highly regarded that 12 National Defence Forces worldwide have purchased our safety equipment.
